

PAIN MANAGEMENT INSTRUCTIONS

Post-Operative Medication Schedule

Your doctor may have prescribed or recommended a variety of medications to safely control your pain. If antibiotics were prescribed, follow the instructions on the bottle.

Certain pain medications can cause drowsiness, dizziness, or confusion — do not drive or operate machinery while taking them. Avoid alcohol while on these medications.

It is ideal to begin your medication schedule **BEFORE the local anesthesia wears off**.

If you have any issues when taking recommended or prescribed medications, please call our office to discuss next steps for your pain management.

It is recommended to follow the schedule above for **AT LEAST 1–2 days after the procedure** and may need to be longer depending on the individual. If you are still experiencing **SEVERE pain after 4–5 days**, please call our office.
